NIRANJAN P

Place: Madurai, Tamil Nadu - 625007
Phone: 9677713769
Email: niranjan2006nj@gmail.com

Profile

An enthusiastic Electronics and Communication Engineering undergraduate with hands-on exposure to embedded systems, antenna design, and IoT-based applications. Possesses a proactive learning mindset, strong analytical skills, and a genuine interest in hardware design and real-time systems. Committed to completing tasks with accuracy and accountability, and seeking an opportunity to apply and grow technical skills in a core electronics and hardware engineering environment.

Career Objective

To build a strong career in the Electronics and Communication Engineering domain by contributing to embedded hardware, antenna, and AV/communication system design, with focused interest in IoT-enabled devices and signal processing, while continuously developing my skills and contributing to the organization's growth.

Education

B.E. Electronics and Communication Engineering
Kamaraj College of Engineering and Technology
2024 - 2027 | CGPA: 7.6 | 3rd Year Undergraduate

Diploma in Electrical and Electronics Engineering
KLN Polytechnic College
2022 - 2024 | Percentage: 84%

Secondary School Leaving Certificate (SSLC) - Class X
Dolphin Matriculation Higher Secondary School
2020 - 2021

Skills

Technical Skills:

- MATLAB
- KiCad
- Arduino IDE
- HFSS

Hardware Skills:

- Antenna Design
- Embedded Systems and Sensors
- IoT System Development

Languages

- English
- Tamil

Internship & Courses

Embedded Systems Intern
Pantech Pro ED, Madurai

Completed a hands-on internship in embedded systems (09-06-2025 to 27-06-2025), gaining practical exposure to embedded hardware development.

IoT Full Stack Development
Quantanics TechServ Pvt. Ltd.

Learned full stack development integrated with IoT networks, including building web applications to monitor and control IoT devices using real-time data.

Machine Learning Using Python
Pantech e-Learning

Completed a short-term course covering fundamental ML concepts, data handling, and basic model implementation using Python.

Area of Interest

- Embedded Systems & Hardware Design
- Communication Network
- Antenna Design and RF Systems
- PCB Design and Schematic Development
- IoT-Based Applications

Projects

Design and Analysis of a Horn Antenna using HFSS
Designed and analyzed a horn antenna using HFSS, evaluating gain, radiation pattern, and return loss.

IoT-Based Smart Energy Monitoring System
Developed a system using ESP32 and PZEM-004T to measure and display real-time electrical parameters remotely.

Vigil Eye: Driver Drowsiness Detection and Alert System
Developed a real-time driver drowsiness detection system using computer vision techniques to improve road safety.
